Ausschreibung: Bachelorarbeit in der A&O

Research topic: Team resources and test validation

The focus of this project is to evaluate short scales for measuring perspective taking and humor via an online survey.

Little is known about the relationship between team resources and well-being. In order to measure health-promoting effects, it is important to apply suitable test procedures. In this project, the resource and stress model of teams (e.g. Busch, Deci & Laackmann, 2013) will be extended. The quality of two existing scales will be statistically determined (e.g. item analysis and criterion-related validity). Further possible research questions could be:

- Association between perspective taking/humor and health outcomes
- Association between perspective taking/humor and team outcomes

Method:

An online survey will be administered to students to gather their degree of perspective taking and humor and to explore possible effects on well-being. Statistical procedures will determine the reliability and validity of the scales.

Note: You may write your thesis in German or English. The thesis is suitable for up to two bachelor students.

Please write a short application letter on why you find this topic interesting and which previous experiences and skills equip you to work on this project. You may email your application to the contact detailed below.
