Brainwaves from primary visual cortex are well recovered after delayed bilateral congenital cataract surgery

Kabilan Pitchaimuthu, Giulia Dormal, Suddha Sourav, Idris Shareef, Siddhart S. Rajendran, José Pablo Ossandón, Ramesh Kekunnaya, and Brigitte Röder

Delayed treatment for bilateral congenital cataracts can have severe long lasting effects on high-level visual functions (e.g. face perception) compared to low-level visual functions (e.g. luminance flicker response).
